

WVEMS PERFORMANCE IMPROVEMENT PROJECTS FY 21

- General EMS Topic –
 - Review of patients with a positive stroke assessment; which assessment scale was used and destination selected.
 - Hypotension during transport of intubated patients to review potential need for push dose pressors; also look to see if intubations were first pass success.
- EMS System Topic –
 - Review of STEMI patients; on scene time to 12 lead and First Medical Contact (FMC) to door time; the committee will review more in-depth agencies and providers not meeting the 90th percentile for 10 minutes or less.
 - Ketamine administration – is it being used with a narcotic or as a stand-alone.
- Trauma Topic –
 - Review of pediatric patients ages 0-6; involved in MVC, were they restrained in car seat and how were they transported from scene to hospital
 - Hemorrhagic Shock with saline administration – were BP metrics met with appropriate treatment
- The committee also opted to add an additional topic of reviewing Narcotic usage quarterly. This topic will be reviewing the previous quarter prior to each meeting. It will review Fentanyl administration >100mcg and Morphine usage >4mg. This data will be shared individually with agencies and agencies OMD's.

The above data will use a date range of 1/1/20-12/31/20
