

WVEMS EMS Surge Capacity Annex Plan

I. Introduction:

a. Background& Purpose:

A MCI Surge is a sudden and or unexpected event whether man-made or natural that can overwhelm a local healthcare system. The objective of this plan is to be an annex to the already existing Regional MCI plan. It will focus on maximizing the resource capacity to evaluate, triage, stabilize, and transport victims of a Multi-Casualty Incident (MCI) or other public health emergency when the capacity of the localities' EMS system has been compromised or exceeded.

b. Scope:

The Surge Plan addresses only the mutual aid response of the regional emergency medical services (EMS) system to a Mass Casualty Incident that overwhelms local Prehospital resources.

The mechanism of action for triage, initial stabilization and transport from the incident scene would still follow the parameters of the Regional MCI plan using START triage and the ICS structure. The only added factor would be additional EMS agencies under mutual aid aspects to assist in the uploaded patient count.

II. Command and Control for Surge Incidents:

Following along with the Commonwealth of Virginia MCIM guidelines, surge incidents should follow the ICS Command Structure as far as who makes requests for additional resources and the use of them.

III. Concept of Operations for Surge Incidents:

a. When and how the plan would be activated:

When at any given point of time, a local system's ability to manage a sudden or rapidly growing influx of patients with the available resources is compromised/severely strained. The plan could be activated by the following:

1a. The Incident Command at the scene of an MCI according to the existing local protocol, usually through the local ECC.

2a. The local Emergency Services Coordinator, or that person's representative, of a political subdivision who has authority for the management of the incident.

3a. The Chief Executive Officer, or that person's representative, of a health care facility that is required to evacuate or move patients.

4a. Due to communication ability with the Incident Command, MCI Medical Control and local prehospital resources, it would be advantageous that the local Emergency Operations Center activate the regional surge plan.

b. Use of resources/progression:

As stated in the regional MCI plan vehicle resources are tracked by sources in the staging and transport sector. During a MCI surge, more than likely multiple transport vehicle resources will be needed, both Pre-hospital and civilian sources.

Using the enclosed resource sheets, it is the goal of the WVEMS region to create and distribute a region wide listing of the following resources:

1. Licensed EMS transport vehicles
2. Other local civil sources (School systems, municipal transport systems)
3. Various interoperable communication resources. (radio caches and comm. trailers)
4. Personnel

A. Licensed EMS transport vehicles: WVEMS will compile and have available listing of all EMS agencies and a listing of Licensed EMS vehicles they have and those available through MOUs. The listing will also include licensed transport vehicles for “private” ambulance services that operate within the WVEMS region.

B. Non-EMS Licensed transport resources: WVEMS will construct a listing of civil and private transport resources that are available if needed for a patient surge. The listing will include local school transportation depts., municipal bus services and non- profit social transport services. A listing will be made available to respective jurisdictions.

C. Communication resources: WVEMS will keep a listing of available communication resources that could be available if needed for a MCI surge. Resource listing will include various communication trailers and radio caches owned by various public safety agencies.

D. Personnel: Due to the unique mixture of EMS agencies within the WVEMS boundary, WVEMS will work with agencies on a plan for staffing call-up/recall procedures.

E. Supplies/Equipment: WVEMS will work with NSPA and other agencies on regional sites for potential EMS supply caches.

It is reminded that transport unit availability should not hinder the agency’s ability to provide services for their own locality.

c. Coordination with other Surge resources and planning:

i. Hospitals- WVEMS will offer to participate in local hospital surge capacity planning, as the EMS component is very important as far as transport and destination modalities.

ii. Local Health Departments- WVEMS will offer to work with local VDH emergency planners on the Prehospital component of a surge plan.

iii. Local government – WVEMS will work with locality LEPC or other municipal committees on the EMS component of MCI Surge management.

IV. Information Management

i. Communications Systems for use during Surge Incidents:

Radio communication will remain the primary method of communication for all sectors during a MCI Surge,. The NSPA mobile communications command trailer or other communication resources (VDEM Comm. Bus or VTRS radio cache) may be requested to provide on (or near) site interoperable communications.

V. Demobilization and Recovery :

- 1.. The Medical Incident Manager will be responsible for notifying the EOC and MCI Medical Control that all patients have been assigned to transport units and that all on-scene patient care activities have been completed and ended at the MCI or Evacuation site or sites.
2. The on-scene Medical Incident Manager should confer with the appropriate official(e.g. Incident Command, Emergency Services Coordinator, healthcare facility CEO) to determine any additional patient care need for EMS prior to contacting the MCI Medical Control.
3. MCI Medical Control will deactivate the MCI Plan among activated hospitals when the designated MCI Medical Control hospital is notified by the on-scene Medical Incident Manager that EMS activities are completed at the MCI or Evacuation site or sites, and when it determined that all other patient care issues have been taken care of.
4. Once patient care activities are ended, the EOC and IC will start allowing resources to stand down. Rehabilitation of units will include restocking and cleaning to be functional to return to service within their locality. Rehabilitation of personnel will include incident debriefing and CISM if needed.

VI. Testing and Exercise:

As many agencies and localities only due training on “localized” incidents, many are unfamiliar with what EMS surge capacity is. WVEMS can assist in training and education into Mass Casualty Incident Management and surge capacity. It is vital that education and training be done, as the prehospital component is an important aspect of any multi-agency incident.

Surge Capacity Survey Results Overview

Date: 6/7/2011 1:41 PM PST
Responses: Completes
Filter: No filter applied

2. Does your agency have a MCI plan in place?

Yes		31	66%
No		16	34%
Total		47	100%

3. Does your agency conduct training in Mass Casualty Incidents?

Yes		27	57%
No		20	43%
Total		47	100%

4. If training is conducted, what types of incidents are rehearsed?

Terrorism		15	32%
Natural Disasters		22	47%
Epidemic		6	13%
Not Applicable		18	38%
Other, please specify		17	36%

5. Are those in supervisory positions within your agency experienced in ICS training and responsibilities?

Yes		42	89%
No		5	11%
Total		47	100%

6. Are you as an agency familiar with what EMS Surge Capacity Planning is?

Yes		19	40%
No		28	60%
Total		47	100%

7. Is your agency familiar with what the Regional Hospital Coordination Center is?

Yes		21	45%
No		26	55%
Total		47	100%

8. What is the number of Critically Injured or ILL patients in a given situation that would overwhelm your agency's capacity to handle?

1 - 5		19	40%
6 - 10		21	45%
11 - 15		4	9%
16 and over		3	6%
Total		47	100%

11. In the event of an MCI, how do you get additional staff or duty crews notified to report, so that additional ambulances can be put in service and respond?

Phone Trees		14	30%
Paging system		28	60%
Smart Phones		11	23%
Radio/Pager ALL CALL		31	66%
Other, please specify		15	32%

12. In regards to question #11, what would be the time frame to get additional ambulances out?

1/2 hour - 1 hour		40	85%
1 hour - 3 hours		6	13%
greater than 3 hours		1	2%
Total		47	100%

13. In the event of a sustained (multiple days) MCI event would you be able to staff ALL ambulances continuously in 12 - 24 hour shifts ?

Yes		21	46%
No		25	54%
Total		46	100%
